DETAILED ACTION

1. Amendment filed on 02/10/2005 has been entered.
2. Claims 1-28 are presented for examination.

Response to Arguments

3. Applicant's arguments with respect to claims 1-25 have been considered but are moot in view of the new ground(s) of rejection.

Claim Rejections - 35 USC § 102

4. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

5. Claims 1,3-4,8-9,12-15,17,21-23,26-27 are rejected under 35 U.S.C. 102(b) as being anticipated by McClure (U.S. Patent No. 5,619,466).

Regarding claims 1, 9, 13-15, 26-27, McClure discloses a sense amplifier (Figure 7, 290) for a memory array providing increased reliability in sensing small voltage differences, comprising:

two cross coupled inverters (Figure 7, 290) forming a latch;

supply coupling means (Column 15, lines 5-10) for selectively connecting the latch to a supply source (296, 298);

and bit line coupling means (Figure 2, BLC, BLT) for selectively connecting inputs of each inverter to complimentary bit lines from the memory array (Column 15, lines 1-4); and

delaying means (Figure 7, inverter outputting is /SAEN) for delaying the disconnection of the bit lines from the sense amplifier after the latch has been coupled to a supply source (Column 15, lines 24-67, Column 16, lines 1-57).

Regarding claims 3-4,8-9,17,McClure discloses wherein the supply coupling means comprises an NMOS transistor (Figure 7, 300), and wherein the bit line coupling means comprise a PMOS transistor connected in series between each complimentary bit line and the latch ((ABSTRACT, Figure 6, BLT, BLC), and the delaying means comprises a plurality of inverters (Figure 7).

Regarding method claims 9,12,21-23, the apparatus discussed above would perform the method in theses claims.

Allowable Subject Matter

6. Claims 2, 5-7, 10-11,16,24-25 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Claims 2, 5-7, 10-11,16,24-25 include allowable subject matter since the prior art made of record and considered pertinent to the applicant's disclosure does not teach or suggest the claimed limitations. McClure (U.S. Patent No. 5,619,466), and others, does

not teach the claimed invention having a compensating means comprises a pair of NMOS transistors connected between the latch and the common supply terminal.

7. Claims 18-20,28 are allowed.

Claims 2, 5-7, 10-11,16,24-25 include allowable subject matter since the prior art made of record and considered pertinent to the applicant's disclosure does not teach or suggest the claimed limitations. McClure (U.S. Patent No. 5,619,466), and others, does not teach the claimed invention having a third and fourth PMOS transistors have a terminal configured to coupled to a bit line of memory array and the other terminal coupled to the second node and a control gate coupled to a delayed sense amplifier enable signal source.
